DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 32, 34, 36-38, 40-43, and 45-48 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,733,294 to Forber et al.

Forber discloses a vessel filter comprising a mounting section at opposing end regions of the filter and configured to engage a wall of the vessel (FIG. 4), the mounting section having curved regions at each end region formed by a portion extending back toward a center line of the filter after extending away from the center line of the filter (FIG. 4, the largest diameter section is the mounting section), the mounting section having a first transverse dimension, a first filtering section and a second filtering section each having a transverse dimension less than the first transverse dimension (filtering sections located on each side of 25), each filtering section having a converging region, the converging region having a cylindrical support (27, 23); wherein the first and second filtering sections each comprise a plurality of curved regions formed by portions extending back toward the center line of the filter; wherein the first and second filtering sections each comprise a plurality of curved filter regions, wherein the curved filter regions of the first filtering section and the curved filter regions of the second filtering section are located closer to a center point of the filter than a first end of the mounting section and the curved filter regions of the second filtering section are located closer to a center point of the filter

Art Unit: 3731

3. Claims 32-49 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,601,595 to Smith.

Smith discloses a vessel filter comprising a mounting section at opposing end regions of the filter and configured to engage a wall of the vessel (FIG. 2), the mounting section having curved regions at each end region formed by a portion extending back toward a center line of the filter after extending away from the center line of the filter (the filter extends outward in both directions from 26 and extends outwardly and then converges again at 20 at each end), the mounting section having a first transverse dimension, a first filtering section and a second filtering section each having a transverse dimension less than the first transverse dimension, each filtering section having a converging region, the converging region having a cylindrical support (22, 24); wherein the first and second filtering sections each comprise a plurality of curved regions formed by portions extending back toward the center line of the filter; wherein the first and second filtering sections each comprise a plurality of curved filter regions, wherein the curved filter regions of the first filtering section are located closer to a center point of the filter than a first end of the mounting section (FIG. 2) and the curved filter regions of the second filtering section are located closer to a center point of the filter than an opposing end of the mounting section; further comprising vessel engaging members extending from the mounting section to anchor the vessel filter (19).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jessica R. Baxter whose telephone number is 571-272-4691. The examiner can normally be reached on M-F 8:30AM - 5:00PM.

Application/Control Number: 10/638,846

Art Unit: 3731
